SUMMARY

Final-year CS student with full-stack engineering depth - built and deployed 3 production platforms (88 REST endpoints, 19 DB tables) during a 5-month internship, including cutting one endpoint's response time by 99.9% via an in-memory caching layer. Experience integrating LLM APIs (Google Gemini) for automated content moderation.

TECHNICAL SKILLS

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, Data Modeling
Frontend: React.js, Tailwind CSS, JavaScript, React Query
Database & ORM: PostgreSQL, MySQL, Prisma ORM, Redis
Cloud & DevOps: Docker, GitHub Actions (CI/CD), Render, Neon (cloud Postgres)
AI/ML: LLM API Integration (Google Gemini), Prompt Engineering, Content Moderation Pipelines
Tools: Git, ExcelJS, PDFKit

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Gitam University

March 2026 – July 2026

(under the mentorship of [Dr.G.Lakshmeeswari](#))

- Owned **3 production-grade full-stack platforms** for GITAM University end-to-end - from database schema to deployment - totalling **88 REST API endpoints and 19 database tables** across the stack.
- Built and shipped Achievements Portal, GitamTales, and Placements Hub (details below), with architecture and progress **reviewed regularly by mentoring faculty**.

MODULE 1: Placements Hub

[Github](#) | [Live demo](#)

React, Node.js, Express, PostgreSQL, Prisma, Redis, Docker

- Cut analytics response time **99.9% (728ms → sub-millisecond)** by building a **Redis-ready caching layer** with automatic in-memory fallback.
- Built a placement-prep platform with **33 REST endpoints** and a 12-table PostgreSQL schema, including **10 analytics dashboards (6 Recharts charts)** visualizing company-specific interview trends.
- Deployed to Render** with a GitHub Actions CI/CD pipeline on every push, **rate-limited the API** to handle production traffic reliably.

MODULE 2: GITAM Achievements Portal

[Github](#) | [Live demo](#)

Node.js, Express, PostgreSQL (Neon), Vanilla JS, Chart.js, Cloudinary, ExcelJS, PDFKit

- Built a role-based portal (student/faculty/admin) with **24 REST endpoints**, replacing a manual, paper-based certificate approval process.
- Shipped a **secure OTP password reset** (bcrypt-hashed codes, 10-min expiry, 5-attempt logout) and got the frontend to a **98/100 Lighthouse score** with **0ms blocking time**.
- Traced and fixed 3 separate production failures solo: an SMTP outage silently breaking password resets, disappearing file uploads on redeploy, and a proxy misconfiguration that had disabled rate limiting entirely.

MODULE 3: GitamTales

[Github](#) | [Live demo](#)

Node.js, Express, PostgreSQL (Neon), JavaScript, Tailwind CSS, JWT

- Built an AI-enabled story-sharing workflow (**31 REST endpoints, 5-table schema**) where students publish project write-ups, achievements, and research reflections to a public feed.
- Integrated Google Gemini API** into the submission pipeline for **automated content moderation**, designing prompts to **flag policy-violating content** (abuse, spam, harassment) across **multiple languages** before publish - **reducing manual review load**.
- Enforced **2-tier RBAC** (user/admin) via JWT + live DB flag checks, and secured password reset with **256-bit cryptographic tokens** (1-hour expiry, anti-enumeration).
- Kept the core feed endpoint at **~84ms average response time**; Deployed to Render with a GitHub Actions CI/CD pipeline on every push.

EDUCATION

Bachelor of Technology in Computer Science Engineering

2023 – 2027

GITAM University, Visakhapatnam - 4th Year | CGPA: 8.05/10 | Expected Graduation: April 2027

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Design and Analysis of Algorithms
